Mr. GEORGE ROBERTSON.

P R E F A C E.

THE previous edition of the Pharmacopœia of the London Hospital having become exhausted, the Medical Council, deeming that the time had arrived when the whole matter should undergo a thorough revision, appointed a Committee composed of certain members of the Staff to undertake the work.

The Committee so appointed thought it advisable, not only to effect numerous alterations, but also to endeavour to render the work a useful guide to the students of the Hospital in the art of prescribing. The aim has been to incorporate such recent additions to the *Materia Medica* as have been proved of value, and, as far as possible, to preserve simplicity of formulæ. The mode of preparation has been subjected, in every instance, to a practical test.

The Appendix has been framed with the view of its being of practical use to the Student in his clinical work.

The Committee desires to express its obligation to Mr. George Robertson for his valued and efficient co-operation during the whole progress of the work.

March, 1882.

Acaciæ Gummi, GUM ACACIA,

Preparations.—Mistura Acaciæ,

„ Cretæ,

„ Olei Morrhuæ cum Ferro,

Mucilago Acaciæ,

Pulvis Tragacanthæ Compositus.

Acetum. VINEGAR,

Dose.—1 to 2 fluid drachms,

Preparation.—Emplastrum Cerati Saponis,

Acidum Aceticum, B.P. ACETIC ACID,

Preparations.—Acetum,

„ Scillæ,

Acidum Aceticum Dilutum,

Linimentum Terebinthinæ Aceticum,

Liquor Ammonię Acetatis,

„ Epispasticus.

Acidum Aceticum Glaciale, B.P. GLACIAL ACETIC ACID,

Acidum Arseniosum; B.P. ARSENIOS ACID.

Dose.— $\frac{1}{60}$ to $\frac{1}{12}$ of a grain, in solution,

Preparations.—Liquor Arsenicalis.

„ Arsenici Hydrochloricus.

Pasta Acidi Arseniosi.

Acidum Benzoicum, B.P. BENZOIC ACID.*Dose.*—10 to 15 grains.*Preparations.*—Mistura Acidi Benzoici Ammoniata.

Tinctura Camphoræ Composita.

Trochisci Acidi Benzoici. 1 grain
in each.**Acidum Boracicum.** BORACIC ACID.*Preparations.*—Lintum Boracicum.

Lotio Acidi Boracici.

Unguentum Acidi Boracici.

Acidum Carbolicum (No. 1, Calvert). CARBOLIC ACID (No. 1).

For internal administration.

Dose.—1 to 3 grains.*Preparations.*—Injectio Acidi Carbolicı Hypodermica.

INJECTIONES HYPODERMICÆ.

Injectio Acidi Carbolici Hypodermica.

HYPODERMIC INJECTION OF CARBOLIC ACID.

Take of

Carbolic Acid, No. 1 Calvert 15 grains.

Rectified Spirit 15 minims.

Distilled Water to 1 fluid drachm.

Dissolve the Acid in the Spirit and add the water.

Dose.—1 to 4 minims = $\frac{1}{4}$ to 1 grain Carbolic Acid.**Injectio Acidi Sclerotici Hypodermica.**

HYPODERMIC INJECTION OF SCLEROTIC ACID.

Take of

Sclerotic Acid, pure 15 grains.

Glycerine, pure 15 minims.

Distilled Water to 1 fluid drachm.

Dissolve, and add 1 per cent of Carbolic Acid No 1.

Dose.—1 to 4 minims = $\frac{1}{4}$ to 1 grain Sclerotic Acid.

To be injected deeply well below the true skin.

Injectio Atropiæ Hypodermica.

HYPODERMIC INJECTION OF ATROPIA.

Take of

Sulphate of Atropia $\frac{1}{2}$ grain.

Glycerine, pure 15 minims.

Distilled Water to 1 fluid drachm.

Dissolve, and add 1 per cent. of Carbolic Acid No. 1.

Dose.—1 to 2 minims = $\frac{1}{120}$ to $\frac{1}{60}$ grain Sulphate of Atropia.**Injectio Curaræ Hypodermica.**

HYPODERMIC INJECTION OF CURARA.

Take of

Curara 5 grains.

Glycerine, pure 15 minims.

Distilled Water to 1 fluid drachm.

Mix the Glycerine with the water, and heat the

mixture to the boiling point ; rub the Curara with the hot liquid in a mortar, triturate frequently during twenty-four hours, and then filter.

Dose.—1 minim = $\frac{1}{12}$ grain Curara, cautiously increased.

Injectio Ergotinæ Hypodermica. HYPODERMIC INJECTION OF ERGOTINE.

Take of

Ergotine 15 grains.

Glycerine, pure 15 minims.

Distilled Water to 1 fluid drachm.

Dissolve, and add 1 per cent. Carbolic Acid No. 1.

Dose.—1 to 4 minims = $\frac{1}{4}$ to 1 grain Ergotine.

To be injected deeply.

Injectio Hydrargyri Perchloridi Hypodermica. HYPODERMIC INJECTION OF PERCHLORIDE OF MERCURY.

Take of

Perchloride of Mercury $\frac{1}{2}$ grain.

Chloride of Sodium, pure 5 grains.

Distilled Water to 1 fluid drachm.

Dissolve.

Dose.—4 minims = $\frac{1}{30}$ grain Perchloride of Mercury.
12 minims = $\frac{1}{10}$ grain Perchloride of Mercury, in divided portions in the course of one day.

Injectio Morphiæ Hypodermica. HYPODERMIC INJECTION OF MORPHIA.

Take of

Acetate of Morphia 10 grains.

Glycerine, pure 15 minims.

Acetic Acid

Solution of Potash

} of each a sufficiency.

Dissolve the morphia in $\frac{1}{2}$ drachm of the Water with the aid of a gentle heat, and a few drops of Acetic Acid; when cool, add Solution of Potash nearly to neutralization, then mix with the glycerine and sufficient Distilled Water to make one fluid drachm. Lastly, add 1 per cent. Carbolic Acid No. 1.

Dose.—1 to 3 minims = $\frac{1}{6}$ to $\frac{1}{2}$ grain Acetate of Morphia.

Preparation.—*Injectio Morphiæ et Atropiæ Hypodermica.*

Injectio Morphiæ et Atropiæ Hypodermica. HYPODERMIC INJECTION OF MORPHIA AND ATROPIA.

Take of

Hypodermic Injection of Morphia 2 fluid drachms.

Hypodermic Injection of Atropia 1 fluid drachm

Mix

Dose.—3 minims = $\left\{ \begin{array}{l} \frac{1}{3} \text{ grain Acetate of Morphia} \\ \frac{1}{120} \text{ grain Sulphate of Atropia.} \end{array} \right.$

Injectio Quiniæ Hypodermica. HYPODERMIC INJECTION OF QUININE.

Take of

Sulphate of Quinine, Neutral 20 grains.

Glycerine, pure 1 fluid drachm.

Dissolve by the aid of heat.

Dose.—1 to 4 minims = $\frac{1}{4}$ to 1 grain Sulphate of Quinine. This solution should be warmed before use.

Injectio Strychniæ Hypodermica. HYPODERMIC INJECTION OF STRYCHNIA.

The "Solution of Strychnia," B.P.

Dose.—1 to 2 minims = $\frac{1}{120}$ to $\frac{1}{60}$ grain Strychnia.

THE FOLLOWING REMEDIES IN THE FORM OF
HYPODERMIC DISCS ARE USED:—

Unguentum Hydrargyri Iodidi Rubri,

B.P. OINTMENT OF RED IODIDE OF MERCURY.

Unguentum Hydrargyri Mitius. WEAKER MERCURIAL OINTMENT.

Take of

Mercurial Ointment 1 part.

Petroleum Ointment 2 parts.

Mix.

Unguentum Hydrargyri Nitratis, B.P.

OINTMENT OF NITRATE OF MERCURY.

Preparation.—Unguentum Hydrargyri Nitratis Mitius.

Unguentum Hydrargyri Nitratis Mitius.

WEAKER NITRATE OF MERCURY OINTMENT.

Take of

Nitrate of Mercury Ointment 1 part.

Petroleum Ointment 2 parts.

Mix.

Unguentum Hydrargyri Oxidi Flavi.

YELLOW OXIDE OF MERCURY OINTMENT.

Take of

Yellow Oxide of Mercury 10 grains.

Vaseline 1 ounce.

Mix.

Preparation.—Unguentum Hydrargyri Oxidi Flavicum Atropiâ.**Unguentum Hydrargyri Oxidi Flavicum Atropiâ.**

OINTMENT OF YELLOW OXIDE OF MERCURY WITH ATROPIA.

Take of

Sulphate of Atropia 4 grains.

Distilled Water 20 minims.

Yellow Oxide of Mercury Ointment 1 ounce.

Dissolve the Atropia in the Water, and mix thoroughly with the Ointment.

Unguentum Hydrargyri Oxidi Rubri, B.P.

OINTMENT OF RED OXIDE OF MERCURY.

Unguentum Hydrargyri Perchloridi.

PERCHLORIDE OF MERCURY OINTMENT.

Take of

Perchloride of Mercury 5 grains.

Petroleum Ointment 1 ounce.

Mix.

Unguentum Hydrargyri Subchloridi.

OINTMENT OF SUBCHLORIDE OF MERCURY.

Take of

Subchloride of Mercury 60 grains.

Petroleum Ointment 1 ounce.

Mix

Unguentum Iodoformi.

IODOFORM OINTMENT.

Take of

Iodoform, in fine powder 20 grains.

Petroleum Ointment 1 ounce.

Mix with the aid of heat.

Unguentum Iodoformi Compositum.

COMPOUND IODOFORM OINTMENT.

Take of

Iodoform, in fine powder 120 grains.

Carbolic Acid, No. 2 Calvert 6 grains.

Extract of Hemlock 90 grains.

Petroleum Ointment 1 ounce.

Mix.

Unguentum Petrolei. PETROLEUM OINTMENT.

Take of

VAPORES.

Vapor Acidi Carbolici. INHALATION OF
CARBOLIC ACID.

Take of

Carbolic Acid, No. 2 Calvert 240 grains.

Rectified Spirit 4 fluid drachms.

Dissolve and add

Water to 1 fluid ounce.

Mix,

For Steam Inhalation.—Add 1 fluid drachm to half a pint of water at 140° Fahr., and let the vapour be inhaled.

For Hot Dry Inhalation.—Pour 1 fluid drachm into a heated vessel, and let the vapour be inhaled.

Aqua Acidi Carbolici Pulverisata.

CARBOLIC ACID SPRAY.

Take of

Carbolic Acid, No. 2 Calvert 3 grains.

Hot Water 2 fluid drachms.

Dissolve and add

Water to 1 fluid ounce.

Mix. To be used with a Siegle's Spray Producer.

Vapor Acidi Hydrocyanici, B.P. INHA-

LATION OF HYDROCYANIC ACID.

Aqua Acidi Sulphurosi Pulverisata.

SULPHUROUS ACID SPRAY.

Take of

Sulphurous Acid 10 minims.

Water to 1 fluid ounce.

Mix. To be used with a Siegle's Spray Producer.

Aqua Acidi Tannici Pulverisata. TANNIC

ACID SPRAY.

Take of

Tannic Acid 10 grains.

Water 1 fluid ounce.

Mix. To be used with a Siegle's Spray Producer.

Aqua Ammonii Chloridi Pulverisata.

CHLORIDE OF AMMONIUM SPRAY.

Take of

Chloride of Ammonium 10 grains.

Distilled Water 1 fluid ounce.

Mix. To be used with a Siegle's Spray Producer.

**Vapor Amyl Nitritis. INHALATION OF NITRITE
OF AMYL.**

The vapour of 2 to 5 drops of Nitrite of Amyl on blotting paper or lint for each inhalation.

Vapor Benzoini. INHALATION OF BENZOIN.

Add 1 fluid drachm of simple Tincture of Benzoin to half a pint of water at 140° Fahr., and let the vapour be inhaled.

Vapor Cassiæ. INHALATION OF CASSIA.

Take of

Oil of Cassia 5 minims.

Light Carbonate of Magnesia 2½ grains.

Water to 1 fluid ounce.

Mix.

Add 1 fluid drachm to half a pint of water at 140° Fahr., and let the vapour be inhaled.

PEPTONISED FOODS.

Peptonised Milk.

Take a pint of milk, dilute it with a quarter of a pint of water, and divide the mixture into two equal portions; heat one portion to the boiling point, and then mix it with the cold portion in a jug provided with a cover; add to this three fluid drachms of pancreatic solution, and twenty grains of bicarbonate of soda, and mix well together; set the covered jug aside in a warm situation for two hours and a half, and then boil the contents for three minutes.

Peptonised Gruel.

To a pint of well boiled gruel, made thick and strong, and allowed to cool to 140° Fabr., add four fluid drachms of pancreatic solution, and mix well together; pour the mixture into a jug provided with a cover, and set aside in a warm situation for two hours; then boil the product for three minutes, and, finally, strain.

Peptonised Milk-Gruel.

Gruel, while still boiling hot, is added to an equal quantity of cold milk, in a jug provided with a cover. To each pint of this mixture, three fluid drachms of pancreatic solution, together with twenty grains of bicarbonate of soda, are added, and the whole well stirred. The covered jug is then set aside in a warm situation for two hours, the contents boiled for three minutes, and then strained.

Peptonised Beef Tea.

Mix half a pound of finely minced lean beef with a pint of water, and twenty grains of bicarbonate of soda, and simmer gently for one hour and a half. When it has cooled down to 140° Fabr., add four fluid drachms of pancreatic solution, and keep the mixture in a warm situation for two hours, agitating it occasionally. Then strain without pressure, and boil the strained liquor for five minutes.

Motor-power—Reflex action on tickling hands, putting finger in mouth, &c.
 Playfulness: ability to laugh.
 Power over large joints, small joints: movements of fingers, &c.
Cranial nerves—Movements of eyes.

Estimation of Urea by means of Hypobromite of Sodium.

DESCRIPTION AND METHOD OF USING DR. DUPRE'S
MODIFICATION OF THE APPARATUS OF RUSSELL
AND WEST.

DR. DUPRE'S apparatus, as shown in the woodcut, consists of a bottle in which the reaction between the urine and hypobromite is effected (a). It is fitted with an india rubber stopper which carries a small test tube, attached to a glass rod, and a small piece of glass tube connected with the india rubber tube (b), which conveys the nitrogen evolved to the graduated tube (c), in which it is measured. The upper limb of the graduated tube is fitted with a piece of india rubber tube and closed by means of a pinchcock (d). The cylindrical pneumatic trough (e) is fitted with a sliding rod and clip (f), which carries the graduated gas tube, and is capable of being fixed in any position by means of the clamping screw (g). The *modus operandi* is as follows:—The pinchcock is taken off and the

graduated tube let down until its zero point corresponds with the level of the water in the pneumatic trough. The bottle is unstoppered and 25 C.C. of the hypobromite is put into it; 5 C.C. of the urine for examination is next measured into the little test tube by means of a pipette (*h*). The stopper is replaced, and the little bottle placed for a minute or so in cold water; the pinchcock is now put on again and the graduated tube raised several inches when, if all is tight, the column of water raised in the tube will remain stationary. The bottle is now tilted so as to allow the urine to flow into the hypobromite as rapidly as may be convenient, and a thorough mixing is effected by a gentle rotary motion of the bottle. By suitably inclining and, at the same time, rotating the bottle it is possible alternately to empty and fill the little test tube, and thus effectually to wash out all the urine contained in it. In from one to two minutes the reaction is almost over. The bottle should now be shaken briskly several times; this causes an appreciable amount of effervescence and brings the reaction sharply to the same point each time. In five minutes from the beginning of the experiment the bottle is put into cold water, and the gas tube let down into the cylinder for a few moments and then raised until the water inside and out is on the same level, and the amount of gas collected is read off. The tube is so graduated that each division represents one-tenth of one per cent. of urea. The hypobromite solution is prepared by dissolving 100 grammes of caustic soda in 250 C.C. of water and adding 25 C.C. of bromine.

In order to render the preparation of the hypobromite easy to those who have no laboratory, and to avoid the annoyance of the vapour of bromine, the following method has been devised by Dr. Dupré:—The caustic soda is supplied in bottles containing 100 grammes, and the bromine in hermetically sealed tubes of two sizes (*viz.*) 2·2 C.C. and 4·4 C.C. The former is used when only one experiment is to be made, and the latter for two determinations. The additional apparatus required are, first, a stoppered bottle for the preparation of the soda solution, marked at 250 and

500 C.C.; second, a stoppered cylinder, marked at 23 and 46 C.C., for the preparation of the hypobromite. Fill the stoppered bottle with water to 250 C.C. and add 100 grammes of caustic soda. Supposing hypobromite required for only one experiment, pour into the graduated cylinder 23 C.C. of the above soda solution, drop in gently one of the smaller 2·2 C.C. of bromine and having replaced the stopper, break the bromine tube by means of a smart up and down shake; in a few moments the bromine is dissolved and the hypobromite solution ready for use, no trace of bromine vapour having escaped into the room.

NOTE.—The water in the cylindrical pneumatic trough should have a temperature of $15\cdot5^{\circ}$ C. = $(60^{\circ}$ F.).

STANDARD COPPER SOLUTION.

Fehling's Solution.

For the Estimation of Sugar in Urine.

Take of

Sulphate of Copper, Re-crystallized, 34·65 grammes.

Distilled Water to 200 cub. centims.

Dissolve.

Tartarated Soda, Crystallized, 173 grammes.

Caustic Potash 80 grammes.

Distilled Water to 800 cub. centims.

Dissolve, and keep in separate bottles.

To prepare for use add 1 volume of the Copper Solution to 4 volumes of the Alkaline Solution and mix.

10 c.c. of the prepared solution are reduced by exactly 0·05 gramme of diabetic sugar.

This method of estimating grape sugar is based upon the fact that cupric oxide is reduced to cuprous oxide when heated in contact with grape sugar in the presence of an alkaline tartrate, the cupric oxide being reduced in the proportion of 5 equivalents of $\text{CuO} = 397\cdot5$ to 1 equivalent of grape sugar $= 180$, the resulting $\text{Cu}_2\text{O} = 357\cdot5$, so that 180 grains of grape sugar will reduce 397·5 grains cupric oxide, CuO , to cuprous oxide, Cu_2O , the weight of which will equal 357·5 grains.

Process.—5 c.c. of the urine are measured off and diluted with 95 c.c. of distilled water—

Of this mixture 100 c.c. = 5 c.c. of urine.

„ 10 c.c. = 0·5 c.c. „

„ 1 c.c. = 0·05 c.c. „

(The dilution of the urine is only necessary in order that it may not contain more than 1 per cent. of sugar.)

10 c.c. of the Standard Copper Solution are then measured off into a small porcelain dish, and diluted with 40 c.c. of distilled water; the mixture is then heated to boiling over a lamp, and the diluted urine delivered

from a burette into the hot liquid, in small quantities from time to time, until the blue colour is discharged, which point is best observed by inclining the dish so that the white side is seen through the solution.

After each addition of the diluted urine the mixture is heated to boiling, and the lamp removed so as to allow the precipitated red oxide Cu_2O to subside. The solution, while still hot, is filtered, and divided into three portions; the first portion is acidulated with hydrochloric acid, and sulphuretted hydrogen passed through it; the second is acidulated with acetic acid, and tested with ferrocyanide of potassium; the occurrence of a precipitate in either of the above indicates that an insufficient quantity of the diluted urine has been added.

The third portion is then treated with a few drops of the Standard Copper Solution, and heated to boiling; a precipitate indicates that too much diluted urine has been added; in either case the operation must be repeated.

Suppose 25 c.c. of the diluted urine were required to precipitate all the copper from 10 c.c. of the Standard Copper Solution:—

$25 \times \cdot 05 = 1\cdot 25$ c.c. of undiluted urine, which 1·25 c.c. must have contained all the sugar necessary to precipitate the copper from 10 c.c. of the Standard Copper Solution—viz., 0·05 gramme of sugar. If, therefore, 1·25 c.c. of the undiluted urine contain 0·05 gramme of sugar, a simple rule-of-three sum will give the total quantity of sugar voided in the 24 hours, the urine being measured in cub. centims. for convenience of calculation.

SOLUTIONS FOR THE PRESERVATION AND STAINING OF ANIMAL SUBSTANCES.

Compound Arsenical Solution.

Take of

| | |
|---------------------|--------------|
| Alum | 100 grammes. |
| Chloride of Sodium | 25 " |
| Nitrate of Potash . | 12 " |
| Carbonate of Potash | 60 " |
| Arsenious Acid . | 10 " |
| Boiling Water . | 3,000 " |

Pour the boiling water upon the powders in a basin, and stir well together; when cold, filter. To every $2\frac{1}{2}$ litres of this solution add 1 litre of Glycerine, and 250 c.c. of Methylated Spirit, and mix thoroughly.

Muller's Solution.

Dissolve 19.44 grammes of Bichromate of Potash, and 7.77 grammes of Sulphate of Soda in 173 c.c. of Distilled Water, and filter.

Solution of Bichromate of Ammonia.

Dissolve 2 grammes of Bichromate of Ammonia in 100 c.c. of Distilled Water, and filter.

Solution of Chromate of Ammonia.

Dissolve 2 grammes of Neutral Chromate of Ammonia in 100 c.c. of Distilled Water, and filter.

Solution of Chromic Acid No. 1.

Dissolve 0.25 gramme of Chromic Acid in 100 c.c. of Distilled Water.

Solution of Chromic Acid No. 2.

Dissolve 0.166 gramme of Chromic Acid in 100 c.c. of Distilled Water, then add 200 c.c. of Methylated Spirit, and mix thoroughly.

STAINING SOLUTIONS.

Carmine Stain.

Take of

| | | |
|--------------------------|---|------------|
| Cochineal | } | of each |
| Alum | | 7 grammes. |
| Distilled Water 700 c.c. | | |

Rub the Cochineal and the Alum together to a fine powder; place the mixture in a porcelain dish, and add the water; evaporate down to 400 c.c.; when cool, add $\frac{1}{2}$ per cent. of Carbolic Acid. Lastly, filter through many folds of porous paper.

Logwood Stain.

Take of

Extract of Logwood 12 grammes.
 Alum 36 grammes.
 Distilled Water 54 c.c.
 Rectified Spirit 10 c.c.

Rub the Extract and the Alum together to a fine powder, and triturate the mixture in a mortar frequently during an hour with 27 c.c. of the water; then pour off the clear liquid; continue the trituration with the Spirit and the remainder of the Water for 15 minutes, and again pour off. Finally, filter the united liquids through several folds of porous paper.

NOTE.

The Column "Metric System," is applicable both to weight (in grammes), and to measure (in cubic centimetres).

The exact equivalence of weight and measure holds good only in the case of pure water at 4·5° C. (40° F.), and practically also at 15·5° C. (60° F.).—[1 c.c. of water at 4·5° C.=1 gm.; at 15·5° C=0·99912 gm.]

The value of the gramme in grains has been taken as 15·4322 as determined by late investigations.

Appended are some useful formulæ for converting *weight* into *measure*, and *vice versa*, as well as to find the specific gravity if weight and measure are given.

1. TO CONVERT MEASURE (M.) INTO WEIGHT (W.).

$$\begin{array}{rcl}
\frac{\text{M. in min.} \times \text{Sp. Gr.}}{1.0533} & = & \text{W. in grs.} \\
\text{M. in min.} \times \text{Sp. Gr.} \times 0.95 & = & \text{W. in grs.} \\
\frac{\text{M. in fl. oz.} \times \text{Sp. Gr.}}{0.002194} & = & \text{W. in grs.} \\
\text{M. in fl. oz.} \times \text{Sp. Gr.} \times 455.7 & = & \text{W. in grs.} \\
\frac{\text{M. in fl. oz.} \times \text{Sp. Gr.*}}{0.96} & = & \text{W. in av. oz.} \\
\text{M. in c.c.} \times \text{Sp. Gr.} & = & \text{W. in gm.}
\end{array}$$

2. TO CONVERT WEIGHT (W.) INTO MEASURE (M.).

$$\begin{array}{rcl}
\frac{\text{W. in grs.} \times 1.0533}{\text{Sp. Gr.}} & = & \text{M. in min.} \\
\frac{\text{W. in grs.}}{\text{Sp. Gr.} \times 0.95} & = & \text{M. in min.} \\
\frac{\text{W. in grs.} \times 0.002194}{\text{Sp. Gr.}} & = & \text{M. in fl. oz.} \\
\frac{\text{W. in grs.}}{\text{Sp. Gr.} \times 455.7} & = & \text{M. in fl. oz.} \\
\frac{\text{W. in av. oz.} \times 0.96}{\text{Sp. Gr.}} & = & \text{M. in fl. oz.} \\
\frac{\text{W. in gm.*}}{\text{Sp. Gr.}} & = & \text{M. in c.c.}
\end{array}$$

3. TO FIND THE SPECIFIC GRAVITY (Sp. Gr.) FROM THE WEIGHT (W.) AND MEASURE (M.).

$$\begin{array}{rcl}
\frac{\text{W. in grs.} \times 1.0533}{\text{M. in min.}} & = & \text{Sp. Gr.} \\
\frac{\text{W. in grs.}}{\text{M. in min.} \times 0.95} & = & \text{Sp. Gr.} \\
\frac{\text{W. in grs.} \times 0.002194}{\text{M. in fl. oz.}} & = & \text{Sp. Gr.} \\
\frac{\text{W. in grs.}}{\text{M. in fl. oz.} \times 455.7} & = & \text{Sp. Gr.} \\
\frac{\text{W. in av. oz.} \times 0.96}{\text{M. in fl. oz.}} & = & \text{Sp. Gr.} \\
\frac{\text{W. in gm.}}{\text{M. in c.c.}} & = & \text{Sp. Gr.*}
\end{array}$$

* Sp. Gr. in these formulæ refers to water = 1 ; in the others to water = 1000.
